

RURAL DISTRICT COUNCIL OF HURSLEY.

---

Medical Officer of Health:

J. Lockhart Livingston, M.D.

Hursley,

Near WINCHESTER

March, 1910.

Report for Year 1909.

Gentlemen,

In presenting my nineteenth Annual Report I shall as far as possible follow the directions of the Local Government Board.

Physical features of the District &c. It is moderately elevated, undulating, with a good deal of Woodland: The Soil is chalk in parts, and either sand or gravel over clay in others. The General character of the District is mainly agricultural; There is an absence of extreme poverty amongst the population.

The Chief Occupations are the ordinary ones of a country district, with a proportion of work in the Railway Works : None specially injurious to health.

The Area of the District remains the same - 16757 acres: The estimated Population at the middle of the year - 4112, there being no special reasons for unexpected increase or decrease.

The Births registered were 102, fifty-eight males and forty-four females: Birth-rate 24'80. For the previous ten years, the average number was 94'8 and the average rate - 24'59 (about the same as for the administrative County of Southampton)

There were seventeen births in Hursley, eight in Ampfield, nine in Baddesley, forty-four in Chandlersford, twenty-two in Otterbourne and Allbrook, one in Farley, and one in the Workhouse.

Fifty Deaths were registered within the District, and two residents in this District died in Winchester Hospital, and one in the County Asylum, so that the correct number of Deaths is fifty-three, - twenty-five males and twenty-eight females. There were

eight deaths under one year, and twenty-two at sixty-five years or over (the united ages of these last totalled 1631 years or an average of 74'13).

Death-rate - 12'15, corrected - 12'88. These figures have been unduly swelled by the sudden death in this district of a man who lived in an adjoining district, and by three others - two of whom came here to end their days, and the third - an infant was prematurely born in another district, but died in this. If these four deaths be deducted from the above totals, the normal Death-rate would be - 11'18, corrected - 11'91. The average for the previous ten years - 10'91, corrected 11'47.

Twelve deaths belonged to Mursley, four to Ampfield, four to Baddesley, twenty to Chandlersford, eleven to Otterbourne, (& Allbrook), two to Farley. (Six deaths occurred in the Workhouse and have been reckoned under the parishes to which they belonged).

Causes of Death were:- Whooping-Cough -1, Diphtheria -1, Influenza -2, Erysipelas -1, Tuberculosis -6, Cancer -3, Bronchitis, Pneumonia &c. -5, Heart Disease -7, Apoplexy & Brain Disease -5, Old age -3, Premature birth -3, Accident -1, Other Causes -15.

Inquests were held in two cases - "Found dead - Natural Causes", and "Accidental Fracture of femur" in an old person. There were no Uncertified Deaths. I have no record of Still Births.

The Infantile Mortality - 78'43 is again high, but this was apparently due to non-preventable causes—Premature birth or Congenital defect in four cases (out of eight) and Debility from birth in another.

One death each from Whooping-Cough, Convulsions and Pneumonia.

The average for the previous ten years was 71'11. (6'7 infantile deaths).

The Notification of Births Act has not been adopted, although urged by the County Council.

There were only two deaths from the seven principal Zymotic diseases, and the Zymotic Death-rate is '48, less than the average for the administrative County. One was an infant of less than two months, who died from Whooping-Cough, the other - a child of 18 months, who died from Diphtheria - having been treated by a Chemist, in the first instance, without a diagnosis being made.

Two deaths were returned as due to Epidemic Influenza, but it is doubtful if this includes all the cases, the name Influenza being differently applied by different practitioners.

Three deaths were due to Cancer, a death-rate of '72.

Six deaths were ascribed to Tuberculosis - four Pulmonary (Consumption), and two other Tuberculosis diseases: Tuberculosis Death-rate - 1'45.

Other Respiratory diseases account for five deaths. There were twenty-nine notifications of Infectious Diseases, - eleven of Scarlet-Fever, twelve Diphtheria, and six Erysipelas.

The Scarlet-Fever cases occurred in eight houses, ten cases in Chandlersford, and one in Otterbourne; the initial symptoms were as a rule mild, and all recovered.

The Diphtheria cases occurred in seven houses, two cases in Hursley, four in Baddesley, six in Chandlersford, one child aged 18 months, dying in Baddesley.

Measles, and Whooping-Cough, Influenza and a few cases of Chicken-Pox were the chief Non)notifiable Infectious Diseases prevalent.

Methods of dealing with Infectious Diseases. Small-Pox We have no provision for the isolation of cases of Small-Pox beyond the Hospital tent owned by the Council, and no ambulance for the removal of such cases if they occurred. It is probable none of the neighbouring districts would take them even for payment, and we should be restricted to the use of the tent or an isolated cottage - if available. Vaccination and supervision of all contacts would be the chief measure of prevention, along with the destruction

of clothing, bedding etc.,

Scarlet-Fever and Diphtheria Cases are isolated at home, as far as possible, the mother in most cases undertaking the nursing, disinfectants are supplied by the Council, and in the cases of 'Poor Persons' - Diphtheria antitoxin and Bacteriological examination. At the termination of the case, the infected room, clothing, and bedding are exposed to the vapour of Formalin gas, evolved by pouring Commercial Formalin on Per-manganate of Potash crystals. During the illness, and for a week or two after, other children in the family are kept at home from school. The sanitary condition of the premises is investigated in all cases, and the home visited from time-to-time, during the illness, to see that the necessary precautions are being taken to prevent spreading.

Enteric Fever. Similar inspection and visits made, and advice given as to disinfection and disposal of the excreta.

Investigation of Water and Milk supply.

Puerperal Fever. Investigation of Midwife's practice &c. and stopping her attendance on other cases until sanctioned by the supervising authority after disinfection.

#### Methods of dealing with Infectious Diseases Contd.

Erysipelas. On receiving a Notification, an investigation of the sanitary condition of the premises made, and any nuisance existing is dealt with, the cases of this disease in our district have not spread as a rule.

Measles and Whooping-Cough. Not being notifiable diseases the chief measures available in the case of children of school age are Exclusion from school until free from infection, usually for four and six weeks respectively.

The Infectious Disease (Notification) Act has been in force since the beginning of 1890, and has been most useful in helping to limit the spread of infectious disease.

We have no Infectious Hospital, and no arrangement with any other authority to take infectious cases.

I have already mentioned the method used for disinfecting rooms, clothing, bedding &c., by exposure to Formaldehyde; In the case of clothing and bedding, this is not to be compared to a Steam Disinfector.

Bacteriological examination of the swabbing of every case of suspicious sore-throat is now carried out at the expense of the Council - in the case of "poor persons", and this has been a great assistance in discovering 'missed' and 'carrier' cases of Diphtheria. I may here mention an unusual case of persistence of Diphtheria bacilli in the throats of at least two members of a family - fortnightly swabs having been continuously "positive" for several months. By your direction a 'virulence test' is being carried out to see if these germs are still capable of producing the disease in others.

Tuberculosis. The Council last year adopted a system of Voluntary Notification, but I have not yet received a single one except those occurring in my own practice. At the same time, free bacteriological examination of sputum from suspected cases was adopted, but reports of my own cases are the only ones I have received so far. A man off the road was admitted into the Workhouse (Feb: 1910) with symptoms of Bronchitis, but being suspicious, I had the sputum examined with the result that it proved to be Tubercular: When he leaves the Workhouse, a Notification has to be sent by the Master to the V.O.H. of the place where he is believed to be going &c.

Four cases of Tuberculosis under the Poor Law were notified during the year, one of these came from another district, and was comparatively well while here.

I have not, so far, been able to use the Hospital Tent for any case, but am most anxious to do so; the difficulty will be to get someone else besides the patient to sleep in the Tent.

On receiving a Notification the house is visited, and directions given to burning the expectoration, advantages of an

open-air life pointed out, also the danger of others from occupying the same bedroom &c., and the sanatorium treatment recommended in suitable cases; later visits are paid from time to time.

Elementary Schools. Hursley (mixed) Ampfield (mixed) Baddesley (mixed) Chandlersford (mixed) and (Infants') Otterbourne (Boys) and (Girls) Allbrook (Infants') are those in this district. All except Ampfield (which has been visited by the Inspector) - have been visited on several occasions, and their sanitary condition found fairly satisfactory: There is a difficulty in obtaining a satisfactory Water supply at Ampfield, but this is satisfactory in ~~Schools~~.

The Case of other Schools.

Whenever cases of Diphtheria and Scarlet Fever have arisen amongst children who had been attending school, the school has been visited in order to find a possible source of infection, in some instances every child in a class being examined for traces of recent illness. In the case of Diphtheria, swabs are taken from "contacts" and "suspects".

In conjunction with the County Medical officer, every child present in a particular class at Chandlersford (mixed) School was examined for traces of peeling, but without result.

Dr. Lyster also visited - with me - the wooden huts at Chandlersford occupied by the family of Grook during the existence of the Diphtheria cases.

By mutual arrangement, the Infants' Department of the Otterbourne Girls' School was closed - on account of Measles - from Sept: 22nd. to Oct: 6th, inclusive.

The Medical Inspection of School children (by the County Medical officer and his assistants) is likely to lead to the correction of defects which could not - without difficulty - be accomplished in any other way.

House Accommodation. Especially for the working classes is generally sufficient, although in parts of the district, there

is room for more: Fitness for habitation. There is room for improvement in the condition of many of the cottages in the older parts of the district - the height of upstairs rooms is often insufficient; Ventilation of rooms imperfect owing to the absence of fireplaces, and the construction of windows; lime-washing not sufficiently attended to; repairs neglected.

Sufficiency of open spaces about houses - as a rule adequate. Cleanliness of surrounding - In many instances, there is room for improvement.

Supervision over erection of new houses. Bye laws have been very useful, and should be strictly adhered to; there is apparently nothing to prevent building on low-lying sites even when quite unsuitable.

There have been three complaints of overcrowding in Hursley during the year, and in two instances an improvement was effected.

No action has been taken under the Housing of the Working Classes Act during the year.

Excrement and Refuse Disposal. In the greater number of cottages, both are used on the garden, and with sufficient ground close to the house, no nuisance arises unless placed in a hole, and not covered with earth.

There is no Scavenging.

Sewerage and Drainage. It is sufficient in all parts of the district. If we could get rid of the nuisances arising from overflowing and improperly pumped cesspits by a moderate expenditure on Sewerage, it would be a very desirable improvement.

The unpleasant smells at Chandlersford render some alteration of the present system desirable. The Allbrook drain has been less complained of than formerly, but more attention is needed to keep it properly flushed. The catchpits in the Hursley surface water drain are very objectionable, and indeed the whole drain requires relaying, I understand.

Condition of Sewers and House-drains. The latter are too often neglected, and allowed to become broken, so that their contents leak into the soil. More means of inspection are required.

Sewage Disposal. There are no sewers as generally understood; In the two or three instances where the combined drains of a block of cottages are technically a sewer, the contents run over the adjoining land, and no nuisance is caused.

Bacterial filtration or land treatment of the Allbrook drainage would be a great improvement. But pumping would be necessary in either case.

Pollution of Rivers and Streams. Surface and some slop water finds its way into the stream at Allbrook, but so long as the drain is kept properly flushed, no serious inconvenience is caused. The drainage and night soil from Mead Villas, Chandlersford, no doubt reach the stream, but I have not observed any nuisance caused in this way, and it would be difficult to stop owing to the proximity of the cottages *to the stream.*

Water Supply. Hursley village, the greater part of Chandlersford, part of Otterbourne, the greater part of Allbrook, and part of Farley have now either a public or private supply - believed to be wholesome and free from pollution. The public supply is from the South Hants Water Co., The whole of Ampfield, Greater part of Baddesley, parts of Hursley, Chandlersford, Otterbourne and Farley are independent on shallow wells or rain-water; the supply is generally sufficient, but in the case of shallow wells *it is always* liable to pollution; the Water-Supply has been specially investigated in ten instances; in one a new supply has been laid on, in at least two others, a new supply has been promised; one well is to be cleaned out; in one instance, the owner has been written to, but has merely substituted dry closets for water closets, and removed the drains, although the Report of the Analysis is very bad; a neighbouring block of cottages has a similar supply: of the others, one has a well, in another, there is no alternative supply,

and in the last of the list there are other defects in the cottages which call for improvement. In one instance proceedings were taken and South Hants Co's water has been laid on: In another instance the case was adjourned.

There is very little contamination by lead so far as I have been able to ascertain.

Milk Supply. I believe the milk produced and sold in the district, is for the most part good and wholesome, but there is very little inspection of the milk itself.

Dairies and Cowsheds of which there are nineteen, have been regularly inspected: Fifteen have been improved, some of them greatly, but in three instances the Regulations are not complied with, although steps are being taken to accomplish this. Much greater care is needed in keeping Cowsheds clean and free from filth, cobwebs &c., also in cleansing the animals and the milkers' hands before milking. We have no provision for ascertaining what proportion of the cows are tuberculous and this is a matter which needs attention.

Every effort to induce owners and occupiers to comply with the Regulations was made during the year.

With regard to Other Foods (than milk) we have no organised inspection, unless some complaint is made, and this applies to premises where foods are stored or exposed for sale, also to the Inspection of meat.

There are two Slaughter houses in the district, and these have been inspected from time to time, and found free from nuisance, but not specially at times of slaughtering.

No action has been taken under the Sale of Food and Drugs Act.

No action taken under Sec. 117. P.H.A. 1875. The Inspector holds a certificate of the Royal Sanitary Institute as Sanitary Inspector.

No carcasses (or parts) Condemned for Tuberculosis.

Factory and Workshop Act. A Register is kept. There are now 5 Workshops, ~~4~~ Bakehouses and 1 Factory, ~~1~~ Bakehouse (power employed in mixing dough).

The Bakehouses have been inspected from time to time during the year, the chief defect being that in five instances they were not found so clean as is desirable. Notices were served under the P.H.A. with the result that matters were improved.

The notices specifying the maximum number of persons who may be employed in each room should be filled up.

Sec. 22. Public Health Acts Amendment Act. 1890 is not in force in the district.

Bye-laws. The present Byelaws have been in force since 1894 being slightly modified from those of 1892. In the early years, they were greatly objected to, but now that Bye-laws are more general, one does not hear the same amount of objection. If adhered to, they should suffice in most instances for the matters dealt with, viz:- Width and Construction of New Streets, Structure of Buildings, Air-space and Ventilation, Drainage and Sanitary arrangements, Buildings unfit for human habitation. Certain modifications have been proposed in the existing Bye-laws and are at present awaiting the sanction of the Local Government Board.

*See next page* We have no Common Lodging Houses and no Byelaws applying to them.

No Bye-laws as to Offensive Trades: The only one carried on in the district - Bohe-boiling - has not been complained of during the year.

No Bye-laws as to Slaughter-houses.

Regulations under the Dairies, Cowsheds and Milk-shops Order have been in force since Jan: 1st, 1890. Owing to their provisions not having been insisted on until a few years ago, there has been considerable difficulty in getting them adhered to. In one instance during the year proceedings were taken to enforce them, with satisfactory result.

*Bye-laws continued*

\* I have felt for a long time that there should be power to prevent building on unsuitable sites - as in the low undrained ground near the railway station, Chandlersford.

Adoptive Acts. The Infectious Diseases (Notification) and (Prevention) Acts are in force in the district.

Application has been made to the L.G.B. for sanction to the adoption of the Public Health Acts (Amendment) Act. 1907.

The Council decided not to adopt the Notification of Births Act. 1907.

Nuisances. Alleged or existing nuisances have been investigated, in 64 instances, and 45 have been abated. Proceedings were taken in three instances; in two the work was completed, in the other it is being done. Where an accumulation of Manure gave rise to nuisance, representations to the owner secured its removal.

In addition to the Inspections which were made as required. Systematic Inspections of portions of the district have been carried out in Hursley, Baddeley and Otterbourne: As a result of these, a number of defects have been remedied, and others are being corrected.

Summary. 1. Matters awaiting the decision of the Council:- Provision of means for isolation of Infectious cases, and Improvement in the method of emptying Cesspits in the more populous parts of the district.

2. Improvements effected:- Closer attention to the investigation and control of infectious cases: Provision of Bacteriological examination and Diphtheria / - Antitoxin in the case of persons who are unable to pay the cost of these: Improved water supply and house drainage: More frequent inspection of Cowsheds.

3. Improvements needed (besides those mentioned in 1.) Improved Water-supply in parts of district: Greater improvements in the state of Cowsheds and the conditions under which milk is procured: Cleaner bakehouses: Extension of means for obtaining bacteriological diagnosis, as by the establishment of a County laboratory.

In conclusion I desire to thank the Council for the support they have given me in carrying out my duties; I also wish to express my regret at the departure of the Inspector (Mr. Woodham) and to thank him for the great help he has always given me - ungrudgingly: I trust that the selection of his successor may be in the best interests of the district.

I am &c.,

Your obedient servant,

J. Lockhart Livingston.

TABLE 1.

## VITAL STATISTICS OF WHOLE DISTRICT DURING 1909 AND PREVIOUS YEARS.

1909	4112	102	24'80	8	78'43	50	12'15	6	0	3	53	12'88

x Rates in Columns 4 and 8 should be calculated per 1,000 of the estimated gross population. In districts in which large public institutions seriously affect the statistics, the rates in Column 13 may be calculated on a nett population, obtained by deducting from the estimated gross population the average number of inmates not belonging to the district in such institutions.

NOTE. - The deaths to be included in Column 7 of this Table are the whole of those registered during the year as having actually occurred within the district or division. The deaths to be included in Column 12 are the number in Column 7, corrected by the subtraction of the number in Column 10 and the addition of the number in Column 11.

By the term "Non-residents" is meant persons brought into the district on account of sickness or infirmity, and dying in public institutions there; and by the term "Residents" is meant persons who have been taken out of the district on account of sickness or infirmity, and have died in public institutions elsewhere.

The "Public institutions" to be taken into account for the purposes of these Tables are those into which persons are habitually received on account of sickness or infirmity, such as hospitals, workhouses and lunatic asylums. A list of the Institutions in respect of the deaths in which corrections have been made should be given on the back of this Table.

Notes.-(a) The separate localities adopted for this Table should be areas of which the populations are obtainable from the census returns, such as wards, parishes or groups of parishes, or registration sub-districts. Block 1 May, if desired, be used for the whole district; and block 2, 3, &c., for the several localities. In small districts without recognised divisions of known population this Table need not be filled up.

(see over.)

- (b) Deaths of residents occurring in public institutions beyond the district are to be included in Sub-columns c of this Table, and those of non-residents registered in public institutions in the district excluded.
- (c) Deaths of residents occurring in public institutions within or without the district, are to be allotted to the respective localities according to the addresses of the deceased.
- (d) Care should be taken that the gross totals of the several columns in this Table respectively equal the corresponding totals for the whole districts in Tables 1 and IV.; thus, the totals of sub-columns a.b. and c should agree with the figures for the year in Columns 2, 3, and 12, respectively, of Tables 1.; the gross total of the sub-columns c should agree with the total of column 2 in Table IV., and the gross total of sub-columns d. with the total of column 3 in Table IV.

## CASES OF INFECTIOUS DISEASE NOTIFIED DURING THE YEAR 1909.

Name of District MURSTRY (Rural)

Notifiable Disease	Cases notified in whole District										Total cases notified in each Locality	X No. of Cases removed to Hospital from each Locality								Total cases removed to Hospital.

Notes.

The localities adopted for this Table should be the same as those in Tables II. and IV. State in space below the name of the isolation hospital, if any, to which residents in the district, suffering from

infectious disease, are usually sent, and the accommodation, available for the district, afforded by it.

Mark (H) the locality in which it is situated, or if not within the district, state where it is situated, and in what District. The name of the authority by whom the hospital is provided should also be given. Mark (W) the locality in which a workhouse is situated.

X This space may be used for record of other disease the notification (Compulsory or voluntary) of which is in force in the district.

(see over.)

H These age columns for notifications should be filled up in all cases where the Medical officer of Health, by in-  
 x quiry or otherwise, has obtained the necessary information.  
 x x Column 8 should be filled up, with the totals of cases removed to Hospital, whether the District is divided into  
 separate localities or is treated as one undivided area.

Isolation Hospital - Situation	Name and none	Total available beds	Number of Diseases that can be concurrently treated

TABLE IV.

## CAUSES OF, AND AGES AT, DEATH DURING YEAR 1909.

Name of District HURSLEY (Rural)

(See Notes at Back.)

Causes of Death.	Deaths at the subjoined Ages of "Residents" whether occurring in or beyond the District.								Deaths at all Ages of "Residents" belonging to Localities, whether occurring in or beyond the District.						Total Deaths whether of "Residents" or "Non-Residents" in Public Institutions in the District.

NOTES TO TABLES IV. AND V.

- (a) In Table IV., all deaths of "Residents" occurring in public institutions, whether within or without the district, are to be included with the other deaths in the columns for the several age groups (columns 2-8). They are also, in columns 9-13, to be included among the deaths in their respective "Localities" according to the previous addresses of the deceased as given by the Registrars. Deaths of "Non-residents" occurring in public institutions in the district are in like manner to be excluded from columns 2-8 and 9-13 of Table IV.
- (b) See Notes on Table I. as to the meaning of "Residents" and "non-Residents" and as to the "Public Institutions" to be taken into account for the purposes of these Tables. The "Localities" in Table IV. should be the same as those in Tables II. and III.
- (c) All deaths occurring in public institutions situated within the district, whether of "Residents" or of "Non-residents" are, in addition to being dealt with as in note (a), to be entered in the last column of Table IV. The total number in this column should equal the figures for the year in Column 9, Table I.
- (d) The total deaths in the several "Localities" in columns 9-13 of Table IV. should equal those for the year in the same Localities in Table II. sub-columns c. The total deaths at all ages in column 11 of Table IV. should equal the gross total of columns 9-13, and the figures for the year in column 12 of Table I.
- (e) Under the heading of "Diarrhoea" are to be included deaths registered as due to Epidemic diarrhoea, Epidemic enteritis, Infective enteritis, Zymotic enteritis, Summer diarrhoea, Dysentery and Dysenteric diarrhoea, Choleraic diarrhoea, Cholera (other than Asiatic or epidemic) and Cholera Nostras.  
Deaths from diarrhoea secondary to some other well-defined disease should be included under the latter.  
Deaths from Enteritis, Mucro-Enteritis, Gastro-Enteritis, and Gastritis (see under the heading Diarrhoeal Disease in Table V. in Tables IV. and V. should be placed immediately below, but separately from, those enumerated under the heading Diarrhoea as defined by enumeration above. This is particularly important for deaths under one year of age, as many of the deaths in infancy returned as due to Enteritis are really caused by Epidemic Diarrhoea. In the course of years, by the adoption of this recommendation, it will be practicable to ascertain the probable amount of transfer between these different headings.
- (f) Under the headings of "Cancer" and "Puerperal Fever" should be included all registered deaths from causes comprised within these general terms. Thus: under "Cancer" should be included deaths from Cancer, Carcinoma, Malignant disease, Scirrhus, Epithelioma, Sarcoma, Villous tumour, and Papilloma of bladder, Rodent ulcer. Under "Puerperal Fever" are to be included deaths from Pyaemia, Septicaemia, Pelvic peritonitis, Peri and Endo-Metritis occurring in the Puerperium.
- (g) Under "Congenital Defects" in Table V. are to be included deaths from Atelectasis, Icterus neonatorum, Navel Haemorrhage, Malformations and Congenital hydrocephalus.
- (h) Under "Tuberculous Meningitis" are to be included deaths from Acute hydrocephalus.
- (i) Under "Other Tuberculous Diseases" are to be included deaths from Tuberculosis, Tuberculosis of bones, joints and other organs, Lupus and Scrofula.
- (j) All deaths certified by registered Medical Practitioners and all Inquest cases are to be classed as "Certified" all other deaths are to be regarded as "Uncertified".

In recording the facts under the various headings of Tables I., II., III., IV., and V., attention has been given to the notes on the Tables.

J. Lockhart Livingston, Medical Officer of Health.

Date March 1910.

## MURSLEY RURAL DISTRICT.

### Annual Report of Inspector of Nuisances for the Year 1909.

#### Infectious Diseases and Disinfection.

One or more rooms in dwelling houses where infectious diseases occurred during the year were fumigated as follows:-

Baddesley	Parish	1
Chandlersford	"	13.
Farley.	"	1
Mursley	"	2
Otterbourne	"	2

#### Water.

The Parishes of Chandlersford and Otterbourne (including Allbrook) obtain their water supply chiefly from the South Hants Water Company's mains, some houses in both these parishes obtaining their supply from wells.

The Village of Mursley is served by a private supply other parts of this parish obtaining a supply from wells.

The parishes of Ampfield and Baddesley are wholly dependent on well water, negotiations are in progress with the South Hants Water Company with a view to an extension of their mains to the more thickly populated portion of the parish of Baddesley, an extension which, if carried out, will provide a much needed improvement.

The Parish of Farley has until recently been wholly dependent on well water, a private supply has now been carried into this parish, which should be of great benefit.

Samples of water have been taken in various parts of the district. In 7 instances (affecting the supply to 33 dwellings) the water upon analysis has been found unsatisfactory. In 4 instances (affecting 13 dwellings) the supply has either been improved or water from another source obtained.

In one instance (affecting 6 dwellings) the Owner has undertaken to provide a wholesome supply; in one instance where summary proceedings have been taken an order was made for the Owners to provide a wholesome supply within 2 months, this order has not yet expired; and in one instance a wholesome supply has yet to be provided.

#### Complaints of Nuisances

Complaints of Nuisances have been received as follows:- Chandlersford 7. Mursley 2. Otterbourne 3. of these complaints 8 were rectified, 1 is being remedied, and in 3 instances no nuisances were found to exist. With one exception the nuisances related to the drainage of, or disposal of refuse from dwellings.

#### Systematic Inspections.

House to house inspections have been made in company with the Medical Officer, and also by myself, in various parts of the district; 64 nuisances relating to various matters being found to exist.

Of these nuisances 45 have been or are being abated. 4 have been partially abated, and 15 have yet to be remedied. Formal notices to abate were served in respect to 20, and summary proceedings taken in respect to 3 of these nuisances.

#### Schools.

The Schools have been periodically inspected and were generally found in a satisfactory condition.

The erection of a new Infants' School at Chandlersford, in place of the old temporary building, is a source of considerable satisfaction.

COMMISSIONER OF THE LAND OFFICE, DEPARTMENT OF THE INTERIOR, WASHINGTON, D. C.

REPORT OF THE COMMISSIONER OF THE LAND OFFICE, IN RESPONSE TO A RESOLUTION OF THE HOUSE OF REPRESENTATIVES, PASSED MARCH 1, 1890

1	2	3
1	2	3
4	5	6
7	8	9
10	11	12

The first of the principal items of business which have been brought before the Commission for its consideration is the report of the Surveyor-General of the Land Office, in response to a resolution of the House of Representatives, passed March 1, 1890, relating to the survey of the public lands. The Surveyor-General has submitted a report in which he has given a full and complete statement of the progress of the survey during the year 1890, and has also submitted a plan for the continuation of the survey during the year 1891.

The second of the principal items of business which have been brought before the Commission for its consideration is the report of the Surveyor-General of the Land Office, in response to a resolution of the House of Representatives, passed March 1, 1890, relating to the survey of the public lands. The Surveyor-General has submitted a report in which he has given a full and complete statement of the progress of the survey during the year 1890, and has also submitted a plan for the continuation of the survey during the year 1891.

The third of the principal items of business which have been brought before the Commission for its consideration is the report of the Surveyor-General of the Land Office, in response to a resolution of the House of Representatives, passed March 1, 1890, relating to the survey of the public lands. The Surveyor-General has submitted a report in which he has given a full and complete statement of the progress of the survey during the year 1890, and has also submitted a plan for the continuation of the survey during the year 1891.

The fourth of the principal items of business which have been brought before the Commission for its consideration is the report of the Surveyor-General of the Land Office, in response to a resolution of the House of Representatives, passed March 1, 1890, relating to the survey of the public lands. The Surveyor-General has submitted a report in which he has given a full and complete statement of the progress of the survey during the year 1890, and has also submitted a plan for the continuation of the survey during the year 1891.

The fifth of the principal items of business which have been brought before the Commission for its consideration is the report of the Surveyor-General of the Land Office, in response to a resolution of the House of Representatives, passed March 1, 1890, relating to the survey of the public lands. The Surveyor-General has submitted a report in which he has given a full and complete statement of the progress of the survey during the year 1890, and has also submitted a plan for the continuation of the survey during the year 1891.

The sixth of the principal items of business which have been brought before the Commission for its consideration is the report of the Surveyor-General of the Land Office, in response to a resolution of the House of Representatives, passed March 1, 1890, relating to the survey of the public lands. The Surveyor-General has submitted a report in which he has given a full and complete statement of the progress of the survey during the year 1890, and has also submitted a plan for the continuation of the survey during the year 1891.

**Factories and Workshops.**

A Register has been kept, there being 5 Factories, 5 Workshops (bakehouses) and 3 Workplaces.

These have been periodically inspected, in 5 instances the bakehouses were not considered satisfactory, and the Occupiers were notified of the defects, which were rectified.

**Dairies, Cowsheds, and Milkshops.**

A Register has been kept, the names of 30 cowkeepers, Purveyors of milk or Dairymen being now upon the Register. The names of 1 additional Purveyor of milk, and 1 cow-keeper and Purveyor have been added to the Register, (Chandlersford Parish) during the year.

Inspections have been made (frequently) and in 15 instances the cowsheds did not comply with the Regulations in various respects.

Of this number 10 subsequently complied wholly, and 3 partly, in one instance the Owner has undertaken to comply, and in 1 instance the necessary work has yet to be carried out. Summary proceedings were in one instance taken to enforce compliance with the Regulations.

**New Buildings.**

Plans for 42 New Buildings or alterations to existing buildings have been submitted for approval during the year, as follows:-

Ampfield	1	Farley	1
Baddesley	2	Hursley	3
Chandlersford	29.	Otterbourne	6

Of these the following have been or are being carried out:-

Ampfield	1	Farley	1
Baddesley	2	Hursley	3
Chandlersford	17	Otterbourne	4

In all instances the buildings have been periodically inspected, and where drains have been laid in connection with same, the drains have been tested prior to the occupation of the premises.

I am, Gentlemen,  
Your obedient servant,  
Henry Woodham.

Chandlersford. January 1st. 1910.

\_\_\_\_\_

This Table is enclosed, by request of the Secretary of State, for the guidance and convenience of Medical Officers of Health in preparing that part of their Annual Report which relates to factories, Workshops, workplaces and home work. It is not intended to supersede the fuller statement which is desirable in the text of the Report, but to provide for uniformity in the presentation of such particulars as lend themselves to statistical treatment.

Further copies can be supplied on application to the Chief Inspector of Factories, Home Office, London, S.W.

# ANNUAL REPORT OF THE MEDICAL OFFICER OF HEALTH FOR THE YEAR 1909.

For the Rural District of HURSLEY.

On the administration of the Factory and Workshop Act, 1901, in connection with  
FACTORIES, WORKSHOPS, WORKPLACES AND HOMEWORK.

## 1.- INSPECTION OF FACTORIES, WORKSHOPS AND WORKPLACES.

Including Inspections made by Sanitary Inspectors or Inspectors of Nuisances.

and chains	(98) Lists	(99) Contractors	(100) Workmen.	(101) Prosecutions (S. 110).

Note The Factory and Workshop Act, 1901 (s.132) requires the Medical Officer of Health in his Annual Report to the District Council to report specifically on the administration of that Act in workshops and workplaces, and to send a copy of his Annual Report, or as much of it as deals with this subject, to the Secretary of State (Home Office). If the Annual Report is presented otherwise than in print, it is unnecessary to include in the copy sent to the Home Office the portions which do not relate to factories, workshops, workplaces or homework. The duties of Local Authorities and the Medical Officer of Health under the Act of 1910 are detailed in the Home Office Memorandum of December 1904. A further Memorandum, on the Home Work provisions of the Factory Act, was issued to all District Councils and Medical Officers of Health in October 1906.

Anchors and  
 Grapnels.....  
 Cart Gear.....  
 Hooks, latches  
 and keys.....  
 Pen picking.....  
 Total.....

x If an occupier gives out work of more than one of the classes specified in column 1. and subdivides his list in such a way as to show the number of workers in each class of work, the list should be included among those in column 2 (or 3 as the case may be) against the principal class only, but the outworkers should be assigned in columns 3 and 4 (or 6 and 7) into their respective classes. A footnote should be added to show that this has been done.

y The figures required in columns 2, 3 and 4 are the total number of the lists received from those employers who comply strictly with the statutory duty of sending two lists each year end of the entries of names of outworkers in those lists. The entries in column 2 must necessarily be even numbers, as there will be two lists for each employer - in some previous returns odd numbers have been inserted. The figures in columns 3 and 4 will usually be (approximately) double of the number of individual outworkers whose names are given, since in the February and August lists of the same employer the same outworker's name will often be repeated.

z- In view of the wide discrepancies found to exist between the totals in the two columns when the returns are added together, it is desired that care may be taken to give exact figures. Only those addresses should be counted which have actually been received from or forwarded to other Councils during the year covered by the Report.

4. Registered Workshops.		5. Other Matters.	
Workshops on the Register (s.131) at the end of the year 1910		Class (1)	
	(2)		No.
Workshop Bakhouses	5	Matters notified to H.M. Inspector of Factories:-	(2)
		Failure to affix Abstract of the Factory and Workshop Acts (s.135)	
		Action taken in matters referred by H.M. Inspector as remediable under the Public Acts, but not under the Factory and Workshop Act (s. 5)	Inspected by H.M. Inspector
		Other.....	Reports (of action taken) sent to H.M. Inspector
		Underground Bakhouses (s.101) -	
		Certificates granted during the year.....	
		In use at the end of the year.....	
Total number of workshops on Register		5	

Important classes of workshops, such as workshops bakhouses may be enumerated here

Date March 1910. (Signature) J. Boehart Livingston,  
 Medical Officer of Health.
